TYPICAL PROJECT: FAMILY HOUSE

SYSTEM WIRING DIAGRAM

DETACHED HOUSE - EXAMPLE:

- JA-100+ control panel (JA-103K, or JA-107K for larger properties) with extended zone capacity to cover the garden and accessories.
- Indoor and outdoor motion detectors (pet-immune) and magnetic contacts on all entry points, including the garage and outbuildings.
- Perimeter protection: detectors and cameras with video verification around the house and the driveway entrance.
- Technical detectors: flood (boiler room, bathrooms), smoke and heat, gas leak, PEVEKO gas shut-off valve.
- Whole-house automation on the same platform: zoned heating (thermostats and radiator heads room by room, underfloor heating), blind and shutter control, smart sockets and lighting, garage door and gate control, energy consumption monitoring.
- MyJABLOTRON for remote management – ideal for holiday homes and cottages too: check the temperature, shut off the water, switch the heating on remotely before you arrive.
- Temporary access codes for guests, tradespeople or short-term rentals (Airbnb); RFID tags for the family.
- Thermostats measuring humidity and CO2 to trigger ventilation.
- Panic button and the option to connect to an Alarm Receiving Centre (ARC).
