

NEW PRODUCTS

in **JABLOTRON Mercury** portfolio

Expansion of the JABLOTRON Mercury range

Based on feedback from installation partners and end users, we are gradually adding new features and additional peripherals to the **JABLOTRON Mercury** system, expanding its capabilities. Whether it's increased comfort, better overview, or a higher level of security, each new component contributes to making **JABLOTRON Mercury** an even smarter and more comprehensive solution.

JA-151F - Wireless flood detector

The wireless water leak detector helps prevent significant damage in the event of a failure of a hose, seal, or other part of the plumbing system or connected appliance. The system triggers an alarm at the very beginning of the incident, allowing the user to take immediate action.

Design range – fully in anthracite colour

The smoke detectors JA-111ST-A-AN and JA-151ST-A-AN in anthracite colour have completed our design range of detectors, which is now fully comprehensive. |
