

CA-340PRG Setting tool

Programming tool for diagnostics and setting the CA-340 and CA-345 car alarms.

Description

The latest version of the CA-340PRG setting tool (with a red target) allows you to set older CA-340 car alarms, using the CarLink application, and the newer CA-345 car alarm, using the C-Link application. In both cases, the device is connected to the PC via a USB interface and communicates wirelessly with the car alarms. Both applications allow you to fully set the car alarms, read the events memory, etc.
