
CR-11A Output extention module for car alarms

The **CR-11** is an **extending output module** which provides additional functions for Jablotron car alarms CA-10, CA-320 and CA-180x.

Beskrivning

The module can be used for **central-locking control, immobilization, an additional siren, a wireless pager, powered window remote control**, etc. It has two **built-in relay**s, each with a 15 Amp switch-over contact. The functions of the relays are selectable by the **DIP switches** inside each CR-11. The module receives data from the car alarm via a single wire (digital communication). Up to four CR-11 units can be connected to each of the above Jablotron car alarms. etc. The older CR-11 module can be combined with the CR-11A.

Tekniska specifikationer

Voltage	12V DC (10-16V DC)
Stand by consumption	5 mA
Max consumption	300 mA (both relays on)
Relay output contacts (each)	permanently 15 A max 20 A (30 seconds)
Working temperature	-40 to +85 °C

The CR-11 complies with IEC 839-10-1 and UN ECE No. 97
